

Elvis Lee

Senior Software Engineer

[linkedin.com/in/elvislee](https://www.linkedin.com/in/elvislee) | 213.880.5255 | elvislee0725@gmail.com | Irvine, CA

LANGUAGES AND TECHNOLOGIES

- **Languages & Databases:** Java, Python, JavaScript, PHP, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- **Frameworks & APIs:** Spring Boot, Spring Security, React, Node.js, Redux, JavaFX, REST, GraphQL, FastAPI
- **Cloud & DevOps:** GCP (BigQuery, Dataflow, Cloud Storage), AWS (EC2, S3, IAM), Kubernetes, Docker, GKE Enterprise, Jenkins, Vault, JFrog Artifactory, Apigee
- **Testing, Tools & Others:** JUnit, Cucumber, JMeter, SonarQube, Veracode, Postman, Kafka, IntelliJ IDEA, VS Code, Git, PagerDuty, Nginx

PROFESSIONAL EXPERIENCE

Cotality | Software Engineer | Irvine, CA

Oct 2021 - Present

AI-Powered Search / Semantic Platform

- Improved the semantic layer query relevance and accuracy (~30%) by refining entity mapping and relationship resolution across distributed data sources.
- Developed a semantic layer microservice using Python, FastAPI, and Redis to translate natural-language prompts into structured, graph-based queries over business data.
- Designed and implemented an intent interpretation pipeline leveraging NLU and semantic parsing to bridge unstructured user input with structured data models for semantic layer.

DataAPI Team

- Engineered a unified GraphQL API (Java, Spring Boot, DGS) to consolidate 12+ REST services across property data domains, reducing client-side API orchestration and improving query flexibility and developer efficiency by 50%+.
- Designed and optimized GraphQL schema and resolver patterns using domain-driven design principles to enable efficient data aggregation and low-latency query execution across distributed services.

Additional Engineering Impact

- Transformed manual Postman regression tests for 16 APIs into an automated Jenkins job for daily monitoring, eliminating manual test execution and saving roughly 4 - 5 engineer hours per week.
- Automated Veracode scans for 20+ apps and library artifacts with Jenkins, integrating Slack alerts to immediately report security findings, reducing manual security reviews by over 70% and improving incident response times.
- Improved API scalability and performance by conducting load testing and tuning, supporting 10,000 concurrent requests and reducing latency by 25%.
- Developed Python automation tool to generate GCP BigQuery schemas and Dataflow configurations, automating manual updates to cloud config files across multiple environments, to reduce configuration time by over 80%.

PalPilot International Corp. | Software Engineer | Tustin, CA

Jan 2016 - Sep 2021

- Owned development of a full-stack job application platform (React, Node.js, PostgreSQL), driving 5–10 monthly applicants and reducing recruiting costs by \$2K+ annually.
- Implemented an event-driven email notification system (JavaScript, SendGrid API) for user inquiries and quote requests, improving sales response times by 50%+.

EDUCATION

M.S. Computer Science, University of Southern California
